HELPING Customers MOVE PRODUCTS

Conveyor Systems

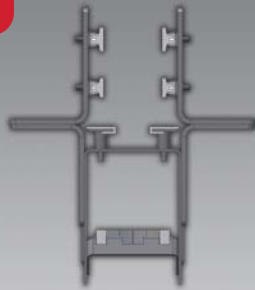

We offer a complete line of pre-engineered conveyors designed to easily integrate into new and existing packaging systems. All of our conveyors are designed for heavy duty construction to meet today's demanding packaging environments.

In addition we also offer custom engineered conveyor solutions for any application to help move your products with speed and efficiency. We leverage our vast experience and our collection of integrative technologies to build custom and specialty conveyors based on each client's needs.

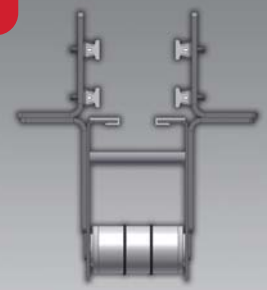

Table & Mat Top Conveyor Systems. Our line of Table Top and Mat Top conveyor modules are designed with flexibility to customize the conveyor to the application and customer specification. Our conveyor standards incorporated many variable features that allow us to provide the conveyor that best suits the application without the expense and lead time of ordering custom conveyors. The conveyors are all available in mild steel (powder coat painted) or stainless steel (brushed finish) with various wear strips and return ways to match chain selection. A variety of upright styles and side rail selections are available to best handle the containers or materials being conveyed. Sanitary conveyor design features are available for high sanitation applications with direct food contact.
